

Natural Gas Compression Rental & Contract Services

**Flatrock
Compression, Ltd.**

Your Uptime is Our Focus

Solely focused on maximizing uptime for your rental and owned compression equipment, our Inspector General performs quality inspections, independent of our mechanics and supervisors, on units running in the field to uncover potential opportunities to improve production or well management and to ensure that Flatrock's procedures are having the desired impact on your operation's uptime.

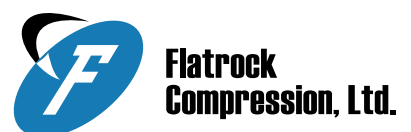

Every aspect of our business, from our strategically placed inventory to our Inspector General, is focused on keeping your equipment up and running, thereby lowering your LOE and increasing your profits.

Our Facilities & Inventory

In addition to our **Victoria** shop, warehouses and fleet, Flatrock also has locations in **Bridgeport**, outside of **Fort Worth**, in **San Antonio**, as well as our corporate headquarters in **Houston**. Selected parts are regionally inventoried for each fleet unit starting with our service trucks, further supported by our local warehouses and our main warehouse in Victoria, Texas, which also serves as our main rental fleet yard, with bays for engine and compressor overhauls, engine swings and package refurbishments.

Flatrock Compression is constantly focused on our client's uptime and profitability.

To discuss how **Flatrock Compression** can immediately help lower your LOE, improve your well's profitability or increase your plant or station's compression availability, **call 281-517-3680 today.**

Local People, Local Resources

Headquartered in Houston, Texas, **Flatrock Compression** provides rental gas compression services for natural gas producers, as well as contract field services for client-owned equipment throughout Texas.

With locations from the **Fort Worth Basin** to far **South Texas**, Flatrock is able to provide OEM-trained mechanics and supervisors who live and work in your area that are available whenever you need any assistance with compression.

In addition, we have four locations across Texas, including shops strategically placed south in Victoria and north in Bridgeport, as well as regional warehouses and a fleet of service trucks that each contain critical parts inventory.

At Flatrock, our pledge to you is to provide distinctive quality and unparalleled customer service for each and every client, large or small.

Maximizing Your Production with Quicker Response Time and Dedicated Professionals

At Flatrock Compression, each of our highly-qualified rental mechanics is assigned responsibility for their own units in their own area, so they know the equipment, inside and out. When needed, you can contact your mechanic directly. This may seem

Natural Gas Compression Rental Services

Small to Midsize Compressors for Natural Gas Wellhead & Gathering Operations

Flatrock rental compressors are ideal for upstream applications where well conditions constantly change, requiring multiple compressors with various specifications over the life of the well. Flatrock maintains a large inventory of rental compressors to cover all well contingencies.

Flatrock's first step begins with our in-house engineers completing an Application Review based on existing and expected future conditions of your well to ensure the optimal compressor selection for each well. Flatrock will then deliver the unit, set it up, start it and maintain it to the highest degree possible. Minimizing your Lease Operating Expenses (LOE) and maximizing your profits is at the center of our attention.

Meet the Fleet

Flatrock is continually adding new equipment into the rental fleet to ensure the best equipment from the top brands is available. Every new unit is equipped with catalyst cans, hospital-grade mufflers and air-fuel ratio controllers, so that we can immediately place compression into non-attainment, low emissions

and/or low noise areas as required. Each new unit is also built to Flatrock specifications, which implement years of reliability and flexibility know how.

However, while we use equipment from top brands, it's not the equipment that makes Flatrock Compression the best in the industry. It's the way that we expertly and professionally service the equipment, and the way we respond to your needs in the field.

Our rental fleets consists of top brands of engines and compressors, including:

- | | |
|--|---|
|  Caterpillar |  Ariel |
|  Waukesha |  GE Oil & Gas |
|  Cummins |  Ajax |
|  And Others |  And Others |

Service & Maintenance

Proper service and maintenance is critical to keeping your equipment running and your profits up. In order to serve you better, you have direct lines of communication to our highly-skilled, local mechanics and supervisors, as

well as access to our preventative maintenance (PM) programs and a continually optimized parts inventory for your equipment.

All compressor units within a designated service area have a local team of OEM-trained mechanics and supervisors that you can contact directly for faster response times and better information sharing. We ensure that every unit in the field has not only a designated mechanic, but a backup should there be multiple needs at any one time.

Every 30 days after each unit is installed at the well, Flatrock performs our extensive 63-point PM inspection to ensure smooth running operation throughout the term of the rental. The parts inventoried on our trucks are regularly updated to match the units in their area and are supported by regional warehouses and our main parts inventory warehouse in Victoria, Texas. Flatrock is also prepared to perform mandated quarterly emissions tests and maintains the documentation for each test. Careful attention is also given to leaks, spills, containment and removal of all hazardous materials.

“old-fashioned,” but we believe direct lines of communication improve both response time and quality of service. You are able to talk to the same person who knows and regularly handles your compressor equipment. In addition to their assigned units, our mechanics are also assigned as support or “overlap” for other mechanics, so there is always a backup mechanic available.

When we service your owned equipment, we meticulously follow conservative proven procedures that meet or exceed OEM guidelines. After all overhauls or major part replacements, our mechanic continues to monitor your equipment for 24 hours to ensure that it is running correctly and efficiently. Yet another example of how Flatrock Compression ensures your production is not interrupted.

Contract Field Services for Customer-Owned Compression

From Complete Engine & Compressor Overhaul to Operation & Maintenance

Flatrock Compression has highly-trained and experienced people and the resources to commission, maintain and overhaul customer-owned natural gas compressor packages up to 8000 hp.

We realize that, when it comes to maintaining large horsepower units, you need someone who is experienced and knowledgeable with the type of equipment you're running and who can get the job done in a timely manner—not someone who is going to “tinker” with it until they need to call someone with more experience. We know your equipment inside and out, and more importantly, we know how to repair it right the first time!

More than Repairs

Because of our experience and having one of the best teams of large unit mechanics in the industry, Flatrock is able to provide more than just field repairs. Our capabilities span from equipment selection and installation all the way to full operations and maintenance. After initial installation our mechanics are available for any call-outs that may be required, as well as following up for PMs at regular intervals.

In addition to repair and preventative maintenance, Flatrock Compression can retrofit, upgrade, test and monitor your equipment to meet the latest emissions standards. Environmental issues are becoming more and more important, and Flatrock Compression has the people and the resources to not only keep your equipment up and running, but to keep you compliant with the latest emission regulations.

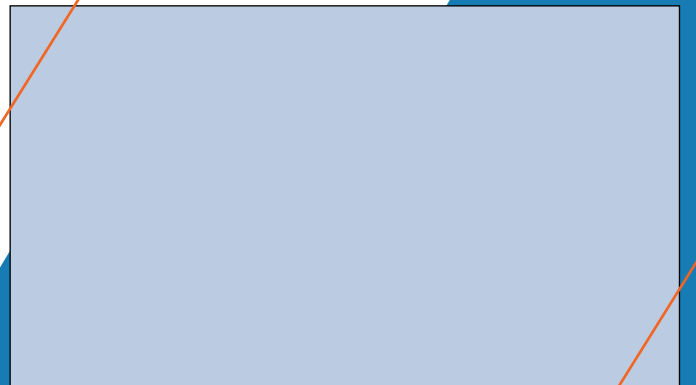

We can provide:

-  Repair & Maintenance (onsite or at one of our repair facilities)
-  Preventative Maintenance
-  Full Engine & Compressor Overhauls
-  Engine Performance Testing
-  Ignition and Lubrications Analysis
-  Equipment Retrofits, Modifications & Upgrades
-  Emissions Testing
-  Failure Diagnosis
-  Testing & Monitoring
-  Component Repair and Replacement
-  Specialty Tooling
-  And More
